Chapter 17

How to deploy a website

© 2022, Mike Murach & Associates, Inc.

Objectives

Applied

1. Deploy a website to a web server that has Internet access.
2. Get your website into the major search engines and directories.

Knowledge

1. Describe the use of an FTP program for transferring files to and from a website on a server.
2. Describe the process of testing a website after it has been deployed.
3. Describe the process for getting your website into search engines and directories.
4. Describe two ways to control which pages on your site are indexed.

How to connect to a website on a web server

1. Use File→Site Manager to display the Site Manager dialog box.
2. Click the New Site button and enter a name for the site.
3. Enter the details needed to connect to the site, including the host name, user name, and password.
4. Click the Connect button.

How to connect to a website the second time

- Open the Site Manager, click on the site name, and click the Connect button.

How to edit the settings for a website

- Open the Site Manager, click on the site name, edit its settings, and click the OK button.

How to test a web page that you've just deployed

- Use Chrome to go to your home page, and navigate to the new page using every route that your site has for getting there.
- Review the contents for the page, and make sure it's all there and it all works.
- Test all the links on the page to make sure they work correctly.
- Test the page in other browsers including tablet and mobile browsers.

How to test a new website

- Use Chrome to review all of the pages and test all of the links, one page at a time.
- Do the same for the other browsers including tablet and mobile browsers.

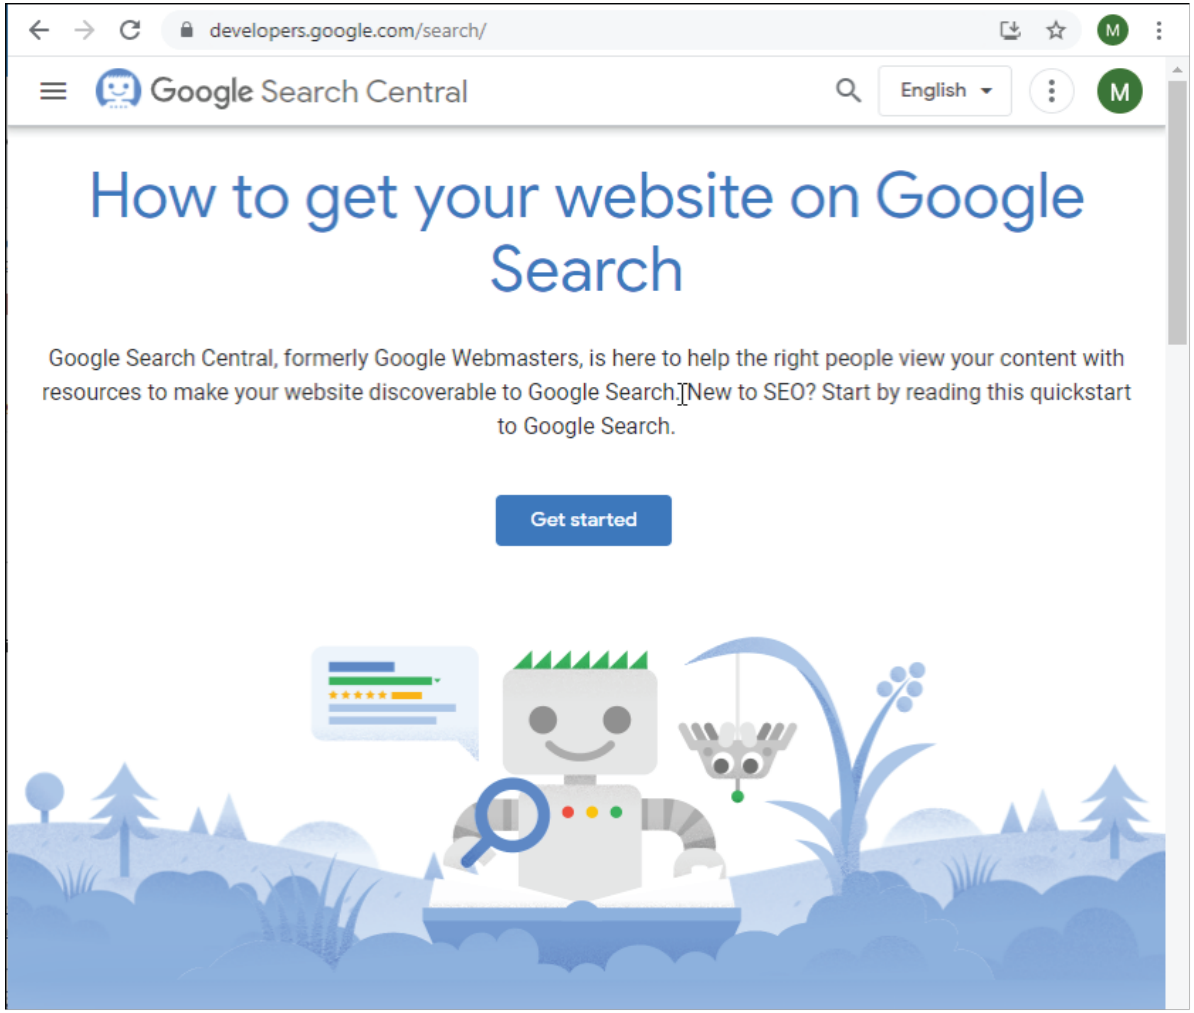
The page for Google Search Central



Three robots.txt files that tell search engines

Not to index the pages in the cart folder

```
User-agent: *
Disallow: /cart/
```

Not to index the pages in two folders

```
User-agent: *
Disallow: /cart/
Disallow: /private/
```

Not to index one folder and one file

```
User-agent: *
Disallow: /cart/
Disallow: /backlist/private.html
```
